RECON

R Epidemics CONSortium

Hospital bed occupancy projections

Description

Specifying the distribution of the length of hospital stay (LoS) for COVID-19 patients by the inter-quartile range (IQR, 25%-75% range). See the 'Inputs' tab for details on these distributions.

ABOUT LEARN EXPLORE

LOG IN

Be part of the global response to COVID19

Join a community of field epidemiologists, infectious disease modellers and volunteer R programmers and contribute to develop free and open source R tools used in the response to the COVID19 epidemic.

Tools developed by the R epidemics consortium (RECON) are essential in helping professionals design outbreak analytics pipelines in response to COVID19.

The tasking manager is a direct communication channel between field agents actively working on the response to COVID19 and the R community.

Your R programming skills can help field agents around the world.

Assignee to Help

Use text content to describe the task. Short and clear descriptions are most likely to generate interest.

Use available labels to reflect the nature of the task. In particular, for rating the complexity and the priority of the task.

Assign task to specific github user or repo

Apple mobility reports #7

New issue

🕒 Open **ffinger** opened this issue on 15 Apr · 2 comments

ffinger commented on 15 Apr • edited ▾

Collaborator 😊 ...

Make apple mobility data available from R.

<https://www.apple.com/covid19/mobility>

It's already a CSV, so very easy to wrap it.

Want to include this in your package **@nacnudus**?

Or in NCoVUtils **@seabbs**?

nacnudus commented on 15 Apr

😊 ...

@ffinger thanks, but my package is only for the Google data.

thibautjombart commented on 20 Apr

Contributor 😊 ...

Yes may for NCoVUtils **@seabbs**?

@ffinger maybe add labels to make the issue more visible?

ffinger added **enhancement** **low_complexity** **medium_priority** **new_package** labels on 20 Apr
